## **DETAILED ACTION**

This is in response to amendment filed 3/15/05 in which claims 1-40 are pending. The applicant's amendments have been fully considered but they are moot based on the new ground of rejection.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 35-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weng et al U.S. patent No 5,574,448 in view of Detch et al U.S. Patent No 6,118,904.

As per claims 35 and 38, Weng et al teaches a demodulation apparatus comprising: means for retrieving is the same as the claimed (recovering) state information from a sequence of code words (see col.4, lines 43-46), the state information representing which of encoding tables has been used in generating a code word immediately following every code word of interest (see fig.2 element 16 and col.4, lines 51-60); means for demodulating the code word (see figs.1 and 4 element 30 and col.4, lines 43-44) of interest into an original code word by referring to a decoding table (see col.5, lines 31-40) in response to the generated state information; means for detecting occurrence of a specified run length in the sequence of code words; and means for reproducing (see figs.4, 6 element 31 and col.3, lines 45-47 and col.4, lines

Application/Control Number: 09/987,034 Page 3

Art Unit: 2638

46-49 and col.6, lines 18-21) auxiliary information from the sequence of code words in response to the detected occurrence run length limitations.

However Weng et al does not teaches means for <u>detecting a frequency</u> of occurrence of a specified run length in the sequence of code words.

Detch et al teaches means for <u>determining a frequency</u> of occurrence of a specified run length in the sequence of code words (see abstract and fig.1 element 7 col.1, lines 46-50).

It would have been obvious to one of ordinary skill in the art to implement the teaching of Detch et al into Weng as to minimize the number of code-words required to encode pixel run length of the image as taught by Detch (see col.6, lines 22-25)

As per claims 36 and 39, Weng and Detch in combination would include means for decrypting encryption-resultant main information represented by a sequence of original code words in response to the reproduced auxiliary information as to accurately recover the original data signal to minimize the number of code-words required to encode pixel run length of the image.

As per claims 37 and 40, Weng and detech in combination would include means for descrambling scrambling-resultant main information represented by a sequence of original code words in response to the reproduced auxiliary information as to accurately recover the original data signal to minimize the number of code-words required to encode pixel run length of the image.

## Allowable Subject Matter

2. Claims 1-34 are allowed over the prior art of record.

Application/Control Number: 09/987,034

Art Unit: 2638

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.

Lee U.S. Patent No 5,995,707 teaches a speed change reproduction recording.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Emmanuel Bayard whose telephone number is 571 272 3016. The examiner can normally be reached on Monday-Friday (7:Am-4:30PM)

Alternate Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Vanderpuye Kenneth can be reached on 571 272 3078. The fax phone

number for the organization where this application or proceeding is assigned is 703-

872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
